DETAILED ACTION

1. The indicated allowability of claims 1-45 is withdrawn in view of the newly discovered reference(s) to Leatham et al. (US 6,312,535 B1). Rejections based on the newly cited reference(s) follow.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1 and 4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Leatham et al. (US 6,312,535 B1).

Leatham '535 discloses relating to a solder joint connections which is widely used in a semiconductor package to bond between, eg., two electronic devices, and

Art Unit: 2815

further discloses having an additive component such as Si₂Al alloys (see column 1, lines 15+), wherein a coefficient thermal expansion (CTE) of silicon is less than about 10 $\mu\text{m}/\text{m}^\circ\text{C}$. While the recitation "a solder component comprising a bonding component selected from the group consisting of In, Sn, Cu, Pb, Sb, Au, Ag, alloys thereof, etc., " is not actually stated by Leatham '535, it is inherently present or certainly would have been obvious to use solder with one of those metals which were merely conventional long prior to the present application, as is notoriously known.

Concerning claim 4, a thermal conductivity enhancement component of the additive component is Al (Si₂Al alloys).

3. Claims 2, 3, 5, 6, 8-11 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

4. Claims 12, and 14-45 are allowed.

The following is an examiner's statement of reasons for allowance: the applied reference fails to teach and/or suggest the limitations as set forth in claims 12, and 18-20.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for **Allowance**."
